

AC_MAPPING

Acceptance Criteria → Test Case Mapping — PA Status Relay

Day 1 QA/Slides deliverable. Every P0/P1 acceptance criterion from PRD Section 3 mapped to at least one test case in `REGRESSION_TESTS.md`. Ambiguous ACs are flagged separately below, not guessed at.

Journey 1: Coordinator — Case Triage & Status Logging

Sub-journey: Case management

AC	Test case(s)
[P0] View case list with key metadata	#1
[P0] Search, sort, filter by status/name/date	#2
[P0] Create case with required fields	#3, #4
[P1] Edit existing case metadata	#5

Sub-journey: Status logging

AC	Test case(s)
[P0] Only valid transitions selectable	#6-19 (full transition map)
[P0] Blocked on missing required metadata, specific inline error	#7, #8, #16, #18, #19, #25
[P0] Immutable audit entry within 500ms, full field set	#32, #33
[P1] Optional reason code; required for Denied/Info Request	#12, #13

Sub-journey: Patient message preview

AC	Test case(s)
[P0] Preview modal shown when consent = TRUE	#35
[P0] Disabled send + consent CTA + suppression logged when consent = FALSE	#36
[P1] Custom message edit flagged in audit trail	#37

Journey 2: Coordinator / Reviewer — Audit Trail Review

Sub-journey: Audit inspection

AC	Test case(s)
[P0] Chronological, immutable audit trail, full field set	#32, #34, #40
[P0] No edit/delete controls rendered	#40, #41, #42
[P0] Filter by action type/actor/date range without reload	#43
[P1] CSV export with case ID + date in filename	#44

Sub-journey: Demo controls

AC	Test case(s)
[P0] Reset to seeded baseline with confirmation, logged as demo_event	#46
[P0] Clone creates independent copy, empty audit trail, status New Order	#47
[P1] Replay from Clone without affecting original's audit trail	#47

Coverage check

Every P0/P1 line in PRD Section 3 has at least one mapped test case. Zero uncovered ACs as of this pass.

Ambiguous ACs flagged for team resolution (not guessed at)

1. **“Reason code required for Denied and Info Request transitions”** (PRD Journey 1) vs. the Engineering Spec’s transition table, which also requires `reason_code` on `submitted → needs_documentation` (amber return) and `peer_to_peer → pending_review`. The PRD’s own P1 line only names two transitions; the actual gate list has four. Test cases follow the Engineering Spec (the more complete source), but the PRD line item itself should be corrected to match, or someone should confirm the PRD was just being illustrative, not exhaustive.
2. **Q8 (already an open item in DECISIONS.md)**: if a coordinator edits the message text then reverts to the original before confirming, is `message_custom` TRUE or FALSE? No test case can be written correctly until this resolves. Flagging again here so it doesn’t get lost, this blocks a real test case, not just a nice-to-have.
3. **“User can provide an optional reason code on any transition”** (PRD, P1) reads as if reason code is available everywhere, but the Engineering Spec only exposes a `reason_code` field on transitions where it’s actually used (5 of the 14 valid transitions). Worth confirming the UI isn’t expected to show a reason-code field on transitions where it does nothing.
