

DECK_STRUCTURE

Presentation Deck Structure — PA Status Relay

Day 1 QA/Slides deliverable. Placeholder structure, content fills in as each day's work completes. Do not build actual slide visuals yet, structure only.

1. Problem

- The 43 PA requests/week, 95% delay stat (AMA 2023)
- \$180K/year buy-and-bill cash-flow risk framing
- **Fills in: Day 2**

2. Market Opportunity

- ~2,600 addressable practices, ~16,700 physicians, ~1M patients/year
- Competitive gap table (CoverMyMeds, D2 Solutions, SmithRx, Infinx, Clearwave, none cover medical-benefit/infused drugs)
- **Fills in: Day 2**

3. Solution Overview

- One dashboard, log/track/relay, plain-language patient messages, immutable audit trail
- Vitamin / Painkiller / Steroid framing from PRD 2b
- **Fills in: Day 2-3**

4. State Machine Diagram

- Visual of the 9-status transition map
- Base this on the Mermaid diagram referenced in PRD Appendix G
- **Fills in: Day 2**

5. Demo Flow

- Narrative spine: Scenario 1 (full happy path), walked live
- Screenshots inserted after Day 5 run-through, not before
- **Fills in: Day 3 draft, Day 5 final**

6. Success Metrics

- The 4-row table from PRD 2d: scenario completion, time-to-audit-entry, message clarity, reviewer buy-in
- Actual results inserted after Day 5
- **Fills in: Day 3 draft, Day 5 final**

7. Next Steps / v2

- What's explicitly deferred: live EHR/payer integration, production messaging, appeal path, PHI handling
- **Fills in: Day 5, during the post-run-through team discussion**

Presenter notes: written per-slide on Day 4, not before, no point writing notes for slides whose content isn't locked yet.

Reviewer feedback form: simple 2-question form (useful/feasible Y-N, open comments), ready by Day 4 EOD.
